Questions of Syntax collects sixteen papers authored by Richard S. Kayne, a preeminent theoretical syntactician, who has sought over the course of his career to understand why both these facts are true. With a particular emphasis on comparative syntax, these chapters collectively consider how wide a range of questions the field of syntax can reasonably attempt to ask and then answer. At issue, among other topics, are the relation between syntax and (certain aspects of) semantics, the relation between syntax and what appear to be lexical questions, the relation between syntax and morphology, the relation between syntax and certain aspects of phonology (insofar as silent elements and their properties play a substantial role), and the extent to which comparative syntax can provide new and decisive evidence bearing on these different kinds of questions. To Kayne, comparative syntax can shed light on what may initially seem lexical

questions, and antisymmetry on the evolution of human language itself. Taken as a whole, these essays elucidate the theoretical contributions of one of the most influential scholars in linguistics. On 22 January 2013, the Republic of the Philippines instituted arbitral proceedings against the People's Republic of China (PRC) under the United Nations Convention on the Law of the Sea (UNCLOS) with regard to disputes between the two countries in the South China Sea (South China Sea Arbitration). On 19 February 2013, the PRC formally expressed its opposition to the institution of proceedings, making it clear from the outset that it will not have any part in these arbitral proceedings and that this position will not change. It is thus to be expected that over the next year and a half, the Tribunal will receive written memorials and hear oral submissions from the Philippines only. The Chinese position will go unheard. However, the Tribunal is under an obligation, before making its award, to satisfy itself not only that it has jurisdiction over the dispute, but also that the claims brought by the Philippines are well founded in fact and law (UNCLOS Annex VII, Article 9). This book aims to offer a (not the) Chinese perspective on some of the issues to be decided by the Tribunal and thus to assist the Tribunal in meeting its obligations under the Convention. The book does not set out the official position of the Chinese government, but is rather to serve as a kind of amicus curiae brief advancing possible legal arguments on behalf of the absent respondent. The book does not deal with the merits of the disputes between the Philippines and the PRC, but focuses on the questions of jurisdiction, admissibility and other objections which the tribunal will have to decide as a preliminary matter. The book will show that there are insurmountable preliminary objections to the Tribunal deciding the case on the merits and that the Tribunal would be well advised to refer the dispute back to the parties in order for them to reach a negotiated settlement. The book brings together scholars of public international law from mainland China, Taiwan and Europe united by a common interest in the law of the sea and disputes in the South China Sea. The work draws conclusions of the fourth conference in a series on the subject of "too big to fail", hosted by the Institute for Law and Finance at Goethe University, Frankfurt am Main on April 23, 2018. It presents the views of key European Union officials as well as senior executives from the financial sector on where Europe stands in this crucial area. The World Commission on Dams (WCD) report (2000) "Dams and Development: A New Framework for Decision-Making" set a landmark in the ongoing controversy over large dams. Now that more than ten years have passed, one has to realize that the WCD norms matter. However, their real chance of becoming implemented relies on whether their core values, strategic priorities and guidelines are accepted by national decision-makers and are translated into official policies and practices. The book's major concern is whether the big hydropower states have improved their standards for environment and resettlement, and whether international standards are applied or exist only on paper. The introductory and synthesis chapters present the methodological approach and discuss the findings. Other chapters analyze changes in dam policies in the big hydropower states Brazil, China, India and Turkey; the role of non-governmental organizations in advocating against the Turkish Ilisu Dam project on the Tigris River; the strategies of International Rivers and World Wildlife Fund for Nature in the global hydropower game; the policies of the German government and its positioning in the dam debate, and the engagement of Chinese actors in building the Bui Dam (Ghana) and the Kamchay Dam (Cambodia). In Guatemala, it was called the "trial of the century": the 2013 prosecution of former de facto head of state (1982-1983) General José Efraín Ríos Montt and his intelligence chief, General José Mauricio Rodríguez Sánchez, on charges of genocide and crimes against humanity against the Maya-Ixil people. Ríos Montt's seventeen-month reign was one of the bloodiest periods in Guatemala's history, with "scorched earth" massacres, the destruction of hundreds of Maya communities, and militarized resettlement of Mayas into "model villages." Ríos Montt was convicted on all charges. Ten days later, a higher court vacated the verdict on dubious procedural grounds. Nevertheless, Guatemala's genocide trial, held in the domestic courts in the country where the crimes were committed, was precedent-setting. In this volume, Guatemalan and international scholars rigorously explore the complexities of the Guatemala experience and reflect upon the case's implications for understanding and prosecuting the category of genocide more broadly. Topics include: the nexus of racism and counterinsurgency in explaining Guatemala's genocide; the politics of Maya collective memory; the intersections of gender, sexuality, and ethnicity in genocide; the decades-long interconnections of national and transnational justice processes that brought the case to trial; and the limits and contributions of tribunal justice. This book was originally published as a special issue of the Journal of Genocide Research. How much further should the affluent world push its material consumption? Does relative dematerialization lead to absolute decline in demand for materials? These and many other questions are discussed and answered in Making the Modern World: Materials and Dematerialization. Over the course of time, the modern world has become dependent on unprecedented flows of materials. Now even the most efficient production processes and the highest practical rates of recycling may not be enough to result in dematerialization rates that would be high enough to negate the rising demand for materials generated by continuing population growth and rising standards of living. This book explores the costs of this dependence and the potential for substantial dematerialization of modern economies. Making the Modern World: Materials and Dematerialization considers the principal materials used throughout history, from wood and stone, through to metals, alloys, plastics and silicon, describing their extraction and production. NTA-CSIR-NET/JRF (Compulsory Paper) General Aptitude: Part A Chapter-wise Solved Papers "An excellent new biography" of the influential songwriter that showcases his renowned humor and musical genius (The Telegraph). With a range that spans the lyrical, heartfelt songs "Angel from Montgomery," "Sam Stone," and "Paradise" to the classic country music parody "You Never Even Called Me by My Name," John Prine is a songwriter's songwriter. Across five decades, he's created critically acclaimed albums—John Prine (one of Rolling Stone's 500 Greatest Albums of All Time), Bruised Orange, The Missing Years—and earned two Grammy Awards, a Lifetime Achievement Award for Songwriting from the Americana Music Association, and induction into the Nashville Songwriters Hall of Fame. His songs have been covered by scores of artists, from Johnny Cash and Miranda Lambert to Bette Midler and 10,000 Maniacs, and influenced everyone from Roger McGuinn to Kacey Musgraves. Hailed in his early years as the "new Dylan," Prine still counts Bob Dylan among his most enthusiastic fans. In John Prine, Eddie Huffman traces the long arc of Prine's musical career, beginning with his early, seemingly effortless successes, which led paradoxically not to stardom but to a rich and varied career writing songs that other people have made famous. He recounts the stories, many of them humorous, behind Prine's best-known songs and discusses all of Prine's albums as he explores the brilliant records and the ill-advised side trips, the underappreciated gems and the hard-earned comebacks that led Prine to found his own successful record label, Oh Boy Records. This thorough, entertaining treatment gives John Prine his due as one of the most influential songwriters of his generation. It is often engaged in a bitter duel with the government on issues as diverse as the administration of cricket in India to whether liquor shops are allowed on highways. Despite such public prominence, very little attention has been paid to who the judges of the Supreme Court are, how they are appointed, transferred and removed, and what they do after retirement. This book provides an account of these four facets of judicial functioning and analyses the processes in operation today. It argues that each of these four aspects gives rise to significant concerns pertaining to judicial independence, accountability, or both. Its main argument is that both judicial independence and accountability are necessary for 'an effective judiciary', and these two values are not in conflict with each other as is commonly assumed. Fully indexed, the Yearbook includes all major General Assembly, Security Council and Economic and Social Council resolutions and decisions, uniquely placing them in a narrative context of United Nations consideration, deliberation and action. This sixty-eighth volume presents the work of the United Nations in dealing with recurring conflicts with severe humanitarian consequences including in the Syrian Arab Republic, where more than 12 million people were in need of basic food, clothing and shelter. The volume also highlights the Organization's rapid response to an escalatory global health emergency—the Ebola virus disease outbreak across West Africa. It documents the Organization's coordination of policy discussions to finalize a global sustainable development agenda, with the security of future generations as the core concern; and its efforts to rebuild societies emerging from conflict while keeping the fragile peace in other places. It further details the entry into force of the landmark Arms Trade Treaty, the missile downing of a passenger airliner in the midst of a geopolitical crisis in eastern Ukraine, and securing international human rights and humanitarian law and prosecuting abusers. Choice Outstanding Academic Title for 2015 One of the most significant and controversial developments in contemporary warfare is the use of unmanned aerial vehicles, commonly referred to as drones. In the last decade, US drone strikes have more than doubled and their deployment is transforming the way wars are fought across the globe. But how did drones claim such an important role in modern military planning? And how are they changing military strategy and the ethics of war and peace? What standards might effectively limit their use? Should there even be a limit? Drone warfare is the first book to engage fully with the political, legal, and ethical dimensions of UAVs. In it, political scientist Sarah Kreps and philosopher John Kaag discuss the extraordinary expansion of drone programs from the Cold War to the present day and their so-called 'effectiveness' in conflict zones. Analysing the political implications of drone technology for foreign and domestic policy as well as public opinion, the authors go on to examine the strategic position of the United States - by far the world's most prolific employer of drones - to argue that US military supremacy could be used to enshrine a new set of international agreements and treaties aimed at controlling the use of UAVs in the future.
