Who are going to be keenest to use what they've just learned; the people you told, or the people you helped work it out for themselves? Which change is going to deliver the fastest results; the one that was imposed or the one that you helped a team develop and agree for itself? Facilitation is an essential skill for learning professionals and managers who want to deliver lasting and productive results. As a facilitator you can maximise performance by tapping into the experience, potential and enthusiasm of an organisation's people. By empowering individuals and teams to take responsibility for their own learning and achievements you can dramatically increase their chances of success. Frances and Roland Bee discuss the role, skills and processes of group facilitation and show you how to: - refine core skills such as rapport building, active listening and effective questioning - design learning events that are really learner-centred - use practical techniques for getting groups started, generating ideas and solving problems - overcome concerns about loss of control - handle challenging situations such as lack of engagement, cynicism and anger. One of the most valuable people in any organisation is the one who can help others solve problems, change and develop. This book gives you the skills to become that facilitator. Dr. D. L. Ramachandra The only pocket-size reference on supervising psychological testing and assessment In 2014, the American Psychological Association (APA) adopted a set of guidelines for clinical supervision for health service psychology. While technically covered by these guidelines, supervising clinical psychological assessment includes additional tasks (such as ensuring accurate administration, scoring, and interpretation of tests) and tensions. Supervisors must often instruct supervisees on the data-integration process—which can involve more direct teaching than standard clinical supervision—while encompassing the same interpersonal, therapeutic, and less structured guiding aspects as psychotherapy supervision. It is increasingly common

to view clinical supervision in the assessment process and supervision of psychotherapy as two significantly different tasks. Surprisingly, there is very little training and guidance available on appropriate, effective, and beneficial methods of psychological assessment supervision. *Essentials of Psychological Assessment Supervision* seeks to remedy the lack of literature in this area, offering guidance on supervising psychological testing and assessment. This much-needed guide provides supervisors with authoritative, up-to-date information on guidelines relevant to assessment supervision. Additionally, detailed coverage of supervision of cognitive, personality/emotional, psychoeducational, neuropsychological, forensic, and therapeutic assessments, among others, provide supervisors with guidance and structure in the supervision process. Focusing on practical application, this book offers guidance on topics such as assessment models appropriate in different areas of assessment; diversity issues; evaluation and feedback of supervisee performance; and ethical, legal, and regulatory considerations relevant in each assessment context. An invaluable resource for practitioners, this book: Offers practical advice on supervising a wide range of clinical psychological assessments Includes contributions from experts in their respective subfields Provides guidance on incorporating new American Psychological Association (APA) and Society for Personality Assessment (SPA) guidelines into the supervision process Fills an urgent need for an up-to-date reference on assessment supervision *Essentials of Psychological Assessment Supervision* is a must-have reference for both psychology practitioners who supervise the assessment process and instructors of psychological testing and assessment. Suicide is a growing tragedy in the US and in the church. We can stop the climbing numbers of suicide deaths, but it is going to take everyone working together, including the church. Without the church, suicidal people may not hear the life-affirming messages they need to hear. Without an informed church, people

who have lost loved ones to suicide may leave the church. Too often, the church watches from the sidelines not knowing what to do. Why is it that the wider (secular) culture is more engaged in suicide prevention than God's people, especially given that Christians care deeply about the sanctity of life? The apostle Paul modeled suicide prevention for the church when he stopped the suicide of the Philippian jailer. But pastors and congregants may not know how to follow his example. The result is that people who struggle with suicide or who have lost loved ones to suicide wonder if the Bible or their church have anything relevant to say about suicide. This book will provide the resources needed to help prevent suicide in a church, even when a church does not want to start one more program. The current practice of medicine is largely moving toward applying an evidence-based approach. Evidence-based medicine is the integration of best research evidence using systematic reviews of the medical literature and then translating it into practice by selecting treatment options for specific cases based on the best research. Clinicians rely on the availability of evidence and accordingly take decisions to provide best treatment to their patients. Clinical management of neurologically compromised patients is challenging and varied; for this reason, treating physicians including neuroanesthesiologists are always in search of best available evidence for patient management and care. *Essentials of Evidence-Based Practice of Neuroanesthesia and Neurocritical Care* highlights the various controversies that exist in the practice of neuroanesthesia and provides conclusive evidence-based solutions. This comprehensive resource succinctly discusses evidence-based practice of neuroanesthesia based on systematic reviews in clinical neuroscience research. Topics include neurophysiology: ICP or CPP thresholds; neuropharmacology: intravenous or inhalational anesthetics; and neuromonitoring: ICP monitoring. Evidence-based practice is now an integral part of neuroscience, and this book will help residents and trainees gain

knowledge to apply it to their practice. • Highlights the various controversies that exist in the practice of neuroanesthesia and provides conclusive evidence-based solutions • Topics include neurophysiology: ICP or CPP thresholds; neuropharmacology: intravenous or inhalational anesthetics; and neuromonitoring: ICP monitoring • Provides residents and trainees with the knowledge to apply evidence-based practice of neuroanesthesia to their practice
