Revised edition of: World of the cell / Wayne M. Becker [and others]. 7th ed. The World of the Cell, Fifth Edition continues the tradition of previous editions widely praised for covering some of the most difficult concepts - bioenergetics, metabolism, enzyme kinetics, thermodynamics, membrane transport, cell signaling, regulatory mechanisms, transcription and translation, signal transduction, and DNA replication and recombination - at the right level. In this new edition, the authors integrate coverage of modern molecular techniques and tools and recent advances without losing students in overwhelming detail that is typically covered in a separate molecular biology course. The World of the Cell's trademark features - Art that Teaches, Multi-level Problem Sets, Quick Check Concept Statements, Guide to Techniques and Methods, and Boxed Essays (Further Insights, Contemporary Techniques, Historical Perspectives, and Clinical Applications) - help students learn processes, not just facts. Featured in this book is a new pronunciation system, new illustrations and a comprehensive index. A programmed approach is used to teach students to build thousands of medical words from Greek and Latin prefixes, suffixes, word roots, and combining forms; recognize medical words and meanings; learn the correct pronunciation of new terms, using standard dictionary symbols; spell medical words correctly, and use a medical dictionary intelligently. The programmed format and the pedagogical aids enhance learning and retention. For the adapted edition, spelling follows Australian medical terminology conventions and Australian pronunciations are given. The free CD-ROM includes exercise and audio pronunciations, all of which are with an Australian accent.
