*Clean Energy and Resource Recovery: Wastewater Treatment Plants as Bio-refineries, Volume 2*, summarizes the fundamentals of various treatment modes applied to the recovery of energy and value-added products from wastewater treatment plants. The book addresses the production of biofuel, heat, and electricity, chemicals, feed, and other products from municipal wastewater, industrial wastewater, and sludge. It intends to provide the readers an account of up-to-date information on the recovery of biofuels and other value-added products using conventional and advanced technological developments. The book starts with identifying the key problems of the sectors and then provides solutions to them with step-by-step guidance on the implementation of processes and procedures. Titles compiled in this book further explore related issues like the safe disposal of leftovers, from a local to global scale. Finally, the book sheds light on how wastewater treatment facilities reduce stress on energy systems, decrease air and water pollution, build resiliency, and drive local economic activity. As a compliment to Volume 1: Biomass Waste Based Biorefineries, *Clean Energy and Resource Recovery, Volume 2: Wastewater Treatment Plants as Bio-refineries* is a comprehensive reference on all aspects of energy and resource recovery from wastewater. The book is going to be a handy reference tool for energy researchers, environmental scientists, and civil, chemical, and municipal engineers interested in waste-to-energy. Offers a comprehensive overview of the fundamental treatments and methods used in the recovery of energy and value-added products from wastewater. related elements (volume density, color, vascularization), descriptions of the different evaluation scales. It also features chapters on the best practices in electronic-file storage for clinical reevaluation and telemedicine procedures for safe remote evaluation. The second section offers a comprehensive review of treatment and evidence-based technologies, presenting a consensus of the various available guidelines (silicone, surgery, chemical injections, mechanical tools for scar stabilization, lasers). The third part evaluates the full range of emerging technologies offered to physicians as alternative or complementary solutions for wound healing (mechanical, chemical, anti-proliferation). Textbook on Scar Management will appeal to trainees, fellows, residents and physicians dealing with scar management in plastic surgery, dermatology, surgery and oncology, as well as to nurses and general practitioners Spinal Cord Injury, the newest volume in the Handbook of Clinical Neurology series, offers a comprehensive and detailed overview of the rapidly evolving science and treatment of spinal cord injury. Outsourcing and research gurus Douglas Brown and Scott Wilson chart a course of advice for business leaders charged with managing sourcing initiatives, present a wealth of opportunities for job seekers, and offer insights for entrepreneurial thinkers and investors worldwide A highly-detailed, practical analysis of fixed income management The Advanced Fixed Income and Derivatives Management Guide provides a completely novel framework for analysis of fixed income securities and portfolio management, with over 700 useful equations. The most

detailed analysis of inflation linked and corporate securities and bond options analysis available; this book features numerous practical examples that can be used for creating alpha transfer to any fixed income portfolio. With a framework that unifies back office operations, such as risk management and portfolio management in a consistent way, readers will be able to better manage all sectors of fixed income, including bonds, mortgages, credits, and currencies, and their respective derivatives, including bond and interest rate futures and options, callable bonds, credit default swaps, interest rate swaps, swaptions and inflation swaps. Coverage includes never-before-seen detail on topics including recovery value, partial yields, arbitrage, and more, and the companion website features downloadable worksheets that can be used for measuring the risks of securities based on the term structure models. Many theoretical models of the Term Structure of Interest Rates (TSIR) lack the accuracy to be used by market practitioners, and the most popular models are not mathematically stable. This book helps readers develop stable and accurate TSIR for all fundamental rates, enabling analysis of even the most complex securities or cash flow structure. The components of the TSIR are almost identical to the modes of fluctuations of interest rates and represent the language with which the markets speak. Examine unique arbitrage, risk measurement, performance attribution, and replication of bond futures Learn to estimate recovery value from market data, and the impact of recovery value on risks Gain deeper insight into partial yields, product design, and portfolio construction Discover the proof that corporate bonds cannot follow efficient market hypothesis This useful guide provides a framework for systematic and consistent management of all global fixed income assets based on the term structure of rates. Practitioners seeking a more thorough management system will find solutions in *The Advanced Fixed Income and Derivatives Management Guide*. An ideal text for introductory information security courses, the second edition of *Elementary Information Security* provides a comprehensive yet easy-to-understand introduction to the complex world of cyber security and technology. Thoroughly updated with recently reported cyber security incidents, this essential text enables students to gain direct experience by analyzing security problems and practicing simulated security activities. Emphasizing learning through experience, *Elementary Information Security, Second Edition* addresses technologies and cryptographic topics progressing from individual computers to more complex Internet-based systems. *Climate Vulnerability, Volume 5* Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators. This book is an update of the first BACC assessment, published in 2008. It offers new and updated scientific findings in regional climate research for the Baltic Sea basin. These include climate changes since the last glaciation

(approx. 12,000 years ago), changes in the recent past (the last 200 years), climate projections up until 2100 using state-of-the-art regional climate models and an assessment of climate-change impacts on terrestrial, freshwater and marine ecosystems. There are dedicated new chapters on sea-level rise, coastal erosion and impacts on urban areas. A new set of chapters deals with possible causes of regional climate change along with the global effects of increased greenhouse gas concentrations, namely atmospheric aerosols and land-cover change. The evidence collected and presented in this book shows that the regional climate has already started to change and this is expected to continue. Projections of potential future climates show that the region will probably become considerably warmer and wetter in some parts, but dryer in others. Terrestrial and aquatic ecosystems have already shown adjustments to increased temperatures and are expected to undergo further changes in the near future. The BACC II Author Team consists of 141 scientists from 12 countries, covering various disciplines related to climate research and related impacts. BACC II is a project of the Baltic Earth research network and contributes to the World Climate Research Programme. This book analyzes how COVID-19 impacted politics and how politics shaped the response to the pandemic in Latin America, the region which has become the epicenter of the global health crisis started in China. The volume brings together studies carried out in eight countries of the region - Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Nicaragua and Uruguay - and show how the impacts and outcomes varied a lot across the region depending on the political processes under way in each country in the years preceding the pandemic and on the political responses adopted by each government to deal with the health crisis. The volume is divided into four parts, each one dedicated to a specific dimension of the relation between politics and COVID-19 in Latin America. The first part is dedicated to denialism, and presents three case studies of governments that denied the importance of the health crisis: Brazil, Mexico and Nicaragua. The second part takes Uruguay and Colombia as two opposite examples of successful and failed state action against COVID-19. The third part analyzes how social movements faced the pandemic in Brazil and Chile. Finally, the fourth part analyzes how public opinion reacted to political responses to COVID-19 in four countries: Argentina, Brazil, Ecuador and Mexico. COVID-19's Political Challenges in Latin America will be a valuable resource for political scientists, sociologists and other social scientists interested in understanding how the pandemic affected politics and how politics affected the fight against the biggest health crisis faced by humanity in the last hundred years. This book includes recent research works on how business around the world affected by the time of COVID-19 pandemic. The impact of recent technological developments has had a tremendous impact on how we manage disasters. These developments have changed how countries and governments collect information. The COVID-19 pandemic has forced online service companies to maintain and build relationships with consumers when their world turns. Businesses are now facing tension between generating sales during a period of severe economic hardship and respect for threats to life and livelihoods that have changed consumer preferences. When the financial firestorm swept through Asia in 1997, many economists scrambled to put together a coherent explanation of such a crisis. Early responses focused on economic and currency issues but these were more likely to be symptoms of the crisis and not causes. Soon after, it became apparent that the very essence of the crisis was of a financial, capital flow and banking nature. Further investigation revealed the crucial role played by foreign money, loose lending practices by banks and unhedged \$US-denominated debt interacting to generate a huge asset price bubble. The twin liberalisations of deregulating capital flows and the domestic financial sector produced an explosion in foreign lending, and in turn a domestic credit boom. This book seeks to fill the vacuum of understanding between the causes of the crisis and those of the 'miracle' or boom. In many ways, financial variables and high profitability were at the heart of the unprecedented 35-year expansion, and not just

the traditional explanations of accumulation and high productivity. For such reasons this book unveils the Western shuttle model (WSM) of economic take-off where catch-up growth is very much a function of exports to mature economy markets, which in turn generate super-profits and so super-growth. The WSM offers several explanations of the crisis including a loss of short term competitiveness, due in part to the asset price bubble crowding out viable export opportunities. In summary, the origins of East Asia's ascent and of its demise are but the same. This book is a compilation of peer-reviewed papers presented at the International Conference on Machine Intelligence and Data Science Applications, organized by the School of Computer Science, University of Petroleum & Energy Studies, Dehradun, on September 4 and 5, 2020. The book starts by addressing the algorithmic aspect of machine intelligence which includes the framework and optimization of various states of algorithms. Variety of papers related to wide applications in various fields like image processing, natural language processing, computer vision, sentiment analysis, and speech and gesture analysis have been included with upfront details. The book concludes with interdisciplinary applications like legal, health care, smart society, cyber physical system and smart agriculture. The book is a good reference for computer science engineers, lecturers/researchers in machine intelligence discipline and engineering graduates. This book provides case studies and general views of the main processes involved in the ecosystem shifts occurring in the high mountains and analyses the implications for nature conservation. Case studies from the Pyrenees are preponderant, with a comprehensive set of mountain ranges surrounded by highly populated lowland areas also being considered. The introductory and closing chapters will summarise the main challenges that nature conservation may face in mountain areas under the environmental shifting conditions. Further chapters put forward approaches from environmental geography, functional ecology, biogeography, and paleoenvironmental reconstructions. Organisms from microbes to large carnivores, and ecosystems from lakes to forest will be considered. This interdisciplinary book will appeal to researchers in mountain ecosystems, students and nature professionals. This book is open access under a CC BY license. It is increasingly recognized that land can be managed most sustainably through involving local communities. This book highlights the potential of a new methodology of uncovering and stimulating community initiatives in sustainable land management in Africa. Analyses of four contrasting African countries (Ghana, Morocco, South Africa and Uganda) show that as communities directly face the challenges of land degradation, they are likely to develop initiatives themselves in terms of sustainable land management. These initiatives (or 'innovations') may be more appropriate and sustainable than those emanating from research stations located far from the communities. The book describes the rationale of the approach used, the set of steps followed, how the project managed to engage the communities to understand the importance of the activities they were undertaking, and how they were stimulated to improve and extend their initiatives and innovativeness. Examples covered include soil fertility, community forestry, afforestation, water, invasive species and grazing land management. Central to the book is the way communities, and scientists, interacted between the four countries and learnt from each other. The book also shows how the initiatives were outscaled locally.
