The most current information on United States secondary schools-- both public and private-- in a quick, easy-to-use format. This directory contains addresses and telephone numbers for senators and committee members and their staff. In addition, it presents information on caucuses, coalitions and bicameral organizations; the House of Representatives; the executive branch; and more. Set includes revised editions of some issues. Scientific notes and summaries of investigations in geology,

hydrology, and related fields. Collection of the monthly climatological reports of the United States by state or region with monthly and annual national summaries. Contains addresses and telephone numbers for United States Senators, Senate committee members and their staff. In addition, it presents information on caucuses, coalitions and bicameral organizations; the House of Representatives; the executive branch; and more. A must-have for anyone working on or with Capitol Hill. Other features include: Quick reference list on inside cover of Senators, Office Suite Numbers and Phone Numbers Frequently Called Numbers page with space to add your own Emergency Assistance numbers (Police, Fire, Medical, maintenance, etc.) from all Senate phones Legislative buzzers and signal lights Locations of all Congressional buildings (including Library of Congress, U.S. Supreme Court, Federal Judiciary Office Building) and Capitol Hill map that indicates

Current Research in Protein
Chemistry: Techniques,
Structure, and Function
focuses on the techniques and
methods used for determining
the structure and function of
proteins. Topics covered range
from protein folding and
stability to catalysis by
chimeric proteins, amino acid

and peptide analysis,
applications of mass
spectrometry to peptide and
protein analysis, and protein
sequencing. This book is
divided into six sections
encompassing 55 chapters. The
first chapter describes a novel
method for protein hydrolysis
by means of microwave
irradiation that uses Teflon-
Pyrex tubes. This is followed by
a discussion of the application
of high performance capillary
electrophoresis to the analysis
of amino acids. The sections
that follow focus on mass
spectrometric methods, protein
sequencing, and capillary
electrophoresis as well as
protein stability, chimeric
proteins and enzyme
modifications, and protein
structure prediction. The
crystal structure of human
interleukin-1alpha, the acid-
denatured states of proteins,
solubility of recombinant
proteins expressed in
Escherichia coli, and catalysis
by chimeric proteins are
considered. The reader is also
introduced to peptide mapping
and internal sequencing of

proteins from acrylamide gels, new approaches to covalent sequence analysis, alkaline denaturation of hemoglobin, and measurements of disulfide bond stabilities in protein

folding intermediates. Students and researchers interested in protein chemistry will find this book extremely helpful.
