Treatment of Thyroid Tumor
Dec 10 2020 Creating clinical
guidelines is a modern trend.
Published studies pertaining to
a given theme are collected,
their credibility evaluated, and
then treatment options in the
form of evidence-based
guidelines are offered. There
are a number of guidelines for
the treatment of thyroid tumors
that have established positions
in clinical practice in North

America and in Western
European countries. In Japan,
however, where radioisotope
facilities are of limited
availability, treatment plans for
differentiated thyroid cancer
differ considerably from those
of America and Europe, and the
associated clinical guidelines
need modification before they
can be adopted. In addition,
although thyroid tumor is a
common disease in endocrine
practice, its management can
differ even among specialists.
Thus, a Japanese clinical
guideline for the treatment of
thyroid tumor was desired by
many clinicians. As a
combination of evidence-based
and consensus-based
guidelines for the treatment of

thyroid tumor, this book offers alternatives to conventional approaches in the West.

Ultimately, the authors hope the guideline will lead to the best possible treatment for patients all over the world in the not-distant future.

Let this authoritative handbook be your guide! *Palliative Care in Oncology* Jun 15 2021 Palliative care provides comprehensive support for severely affected

patients with any life-limiting or life-threatening diagnosis. To do this effectively, it requires a disease-specific approach as the patients' needs and clinical context will vary depending on the underlying diagnosis. Experts in the field of palliative care and oncology describe in detail the needs of patients with advanced cancer in comparison to those with non-cancer disease and also identify the requirements of patients with different cancer entities. Basic principles of symptom control are explained, with careful attention to therapy for pain associated with either the cancer or its treatment and to symptom-guided antineoplastic therapy.

Complex therapeutic strategies for palliative cancer patients are highlighted that involve both cancer- and symptom-directed options and address a range of therapeutic aims. Issues relating to drug use in palliative cancer care are fully explored, and a separate section is devoted to care in the final phase. A range of organizational and policy issues are also discussed, and the book concludes by considering likely future developments in palliative care for cancer patients. Palliative Care in Oncology will be of particular interest to palliative care physicians who are interested in broadening the scope of their disease-specific

knowledge, as well as to oncologists who wish to learn more about modern palliative care concepts relevant to their day-to-day work with cancer patients.
